TEAM CONTRACT

Course: CS252 - Computational Thinking
Semester: Fall 2026 - 2027 | **Class:** 25A01

---

1. Basic Information

- **Team Name:** Group 06
- **Project Title:** Context-Aware Dynamic Routing Assistant Minimizing Real-World Urban Travel Time
- **Group Repository:** CS252-Group6
- **Primary Communication Channels:** Messenger (urgent alerts) & Google Meet (online meetings, technical discussions)
- **Meeting Room:** Google Meet - xqu-dtdq-ner
- **Primary Contact for Instructor/TA:** Do Viet Hoang Long (Team Leader) | `dvhlong2535@apcs.fitus.edu.vn`

---

2. Team Goals & Expectations

- **Target Grade & Quality:** Achieve an "Excellent" grade ($ 10/10$), fully satisfying all course project milestones and weekly lab deliverables.
- **Deliverable Quality:** Deliver an end-to-end computational pipeline that models urban street networks as a time-dependent weighted graph $G = (V, E, W(t))$, balancing deterministic routing (Time-Dependent A^*/Dijkstra optimizing for multi-factor delays: signals, congestion, road degradation, and environmental hazards) with AI-assisted extraction of unstructured community incident reports, validated against empirical travel-time (ETA) accuracy and delay-reduction benchmarks.
- **Effort & Commitment:** Each member commits at least 6–8 hours per week to the project, attends all scheduled meetings, and delivers assigned tasks on time.

---

3. Roles & Responsibilities

Member roster, assigned roles, strengths, areas for improvement, and contact email:

No.	Student ID	Full Name	Primary Role	Strengths	Areas for Improvement	Email
1	**25125024**	**Do Viet Hoang Long (Đỗ Viết Hoàng Long)**	**Team Leader / System Architect**	System design, graph routing pipeline, project coordination	Tends to take on too many tasks	dvhlong2535@apcs.fitus.edu.vn
2	**25125041**	**Pham Tien Dung**	**Core Logic / Graph Routing Dev**	Python engineering, dynamic cost Dijkstra/A* routing	Needs to improve technical documentation skills	ptdung2541@apcs.fitus.edu.vn
3	**25125051**	**Nguyen Thai Bao**	**Algorithmic & Elevation Engine Dev**	Graph algorithms, topographic elevation modeling	Participates less actively in verbal discussions	ntbao2520@apcs.fitus.edu.vn
4	**25125090**	**Dang Thanh Toan**	**Research & Documentation Lead**	Academic report writing, urban risk modeling	New to LLM API integration	dttoan2530@apcs.fitus.edu.vn
5	**25125070**	**Le Quang Nguyen Phuc**	**NLP & Community Extraction Lead**	Prompt engineering, unstructured text parsing	Needs more attention to edge case validation	lqnphuc2570@apcs.fitus.edu.vn
6	**25125010**	**Pham Trung Duy**	**QA / Testing & Benchmarking**	Testing mindset, routing test suites, benchmark evaluation	Needs to improve debugging speed	ptduy2510@apcs.fitus.edu.vn
7	**25125091**	**Tran Duc Toan**	**Presenter & UI/Integration Dev**	Fluent presentation skills, professional slide design	Limited experience with advanced Git practices	tdtoan2591@apcs.fitus.edu.vn

Role Rotation Policy: During iterative milestones and sprints, members may cross-assist or rotate responsibilities to ensure that everyone gains a comprehensive understanding of the entire system architecture.

---

4. Communication & Meetings

- **Communication Channels:**
  - Urgent alerts & rapid updates: Messenger group.
  - Technical discussions, resource sharing, and voice meetings: Google Meet (xqu-dtdq-ner).
- **Response Time Rules:** Within 4 hours for standard inquiries; within 1 hour for urgent pings (`@everyone`).
- **Meeting Schedule:**
  - Weekly Sync: Every Friday at 20:00 (Online via Google Meet) to review progress and assign sprint tasks.
  - In-person Sync (as needed): Saturdays before/after the lab session at Lab Room I61.
- **Meeting Protocols:** Punctuality is required (notify the team at least 15 minutes prior in case of unavoidable delay). Agendas must be prepared beforehand, and designated meeting minutes must be documented in `docs/logbooks/` .

---

5. Work Process & Standards

- **Task Management Tool:** GitHub Projects (Kanban board: *To Do* → *In Progress* → *In Review* → *Done*).
- **Branching Strategy:**
  - Direct commits to the `main` branch are strictly prohibited.
  - Branch naming convention: `<task-type>/<short-description>` (e.g., `feat/ast-parser` , `docs/team-contract` , `test/coverage-eval`).
- **Commit Conventions (Conventional Commits):**
  - `feat: ...` (new feature)
  - `fix: ...` (bug fix)
  - `docs: ...` (documentation/reports)
  - `test: ...` (adding/updating tests)
- **Code Review & Pull Requests (PR):**
  - Every PR merged into `main` must include a clear description and requires approval from at least one peer reviewer.
- **Quality Standards:**
  - Code must adhere to PEP 8 standards, pass all automated unit tests (`pytest`), and include descriptive docstrings.
  - Documentation must be written in clear Markdown format with reproducible instructions.

---

6. Governance & Conflict Resolution

- **Decision Making:** Consensus is prioritized. In the event of disagreements, decisions will be resolved by a simple majority vote (> 50%). In case of a tie, the Team Leader holds the deciding vote.
- **Conflict Resolution Steps:**
  1. *Step 1:* Direct, constructive, and respectful peer-to-peer discussion between the involved members.
  2. *Step 2:* The Team Leader mediates to identify a balanced technical solution.
  3. *Step 3:* If unresolved internally, the Team Leader will consult the Teaching Assistant (TA) or Course Instructor for guidance.
- **Accountability & Consequences:**
  - *First Violation (unexcused absence / missed deadline):* Internal reminder and verbal warning.
  - *Second Violation:* Formal warning and assignment of supplementary support tasks.
  - *Third Violation (persistent neglect / non-contribution):* Formal team meeting, documentation of non-contribution, reduction of the member's contribution percentage in the final project report, and formal notification to the instructor.

---

7. Academic Integrity & AI Policy

- **Permissible AI Use:** Generative AI tools (ChatGPT, Gemini, Claude, GitHub Copilot) are permitted as engineering aids for brainstorming, syntax lookup, code optimization, and drafting documentation.
- **Attribution & Accountability:**
  - Submitting unverified or copy-pasted AI-generated code without full comprehension is strictly forbidden.
  - All code integrated into the repository must be locally executed, tested, and validated with unit tests by team members.
  - Each member must maintain an AI usage log (tool, prompt, purpose, and verification method) in their personal reflection report.

---

8. Amendments & Contract Modifications

- **Revision Process:** Any member may propose an amendment to this contract if working conditions or project scopes change significantly.
- **Approval Threshold:** Proposed modifications must be discussed in a formal team meeting and require a supermajority approval of at least **75% (6 out of 7 members)** to take effect.

---

9. Member Signatures & Acknowledgement

By signing below (or confirming via GitHub Pull Request approval), all members acknowledge that they have read, understood, and agreed to adhere strictly to all terms of this Team Contract:

Student ID	Full Name	Signature / Confirmation	Date
25125024	**Do Viet Hoang Long**	*(Signed / Confirmed via PR)*	15/10/2026
25125041	**Pham Tien Dung**	*(Signed / Confirmed via PR)*	15/10/2026
25125051	**Nguyen Thai Bao**	*(Signed / Confirmed via PR)*	15/10/2026
25125090	**Dang Thanh Toan**	*(Signed / Confirmed via PR)*	15/10/2026
25125070	**Le Quang Nguyen Phuc**	*(Signed / Confirmed via PR)*	15/10/2026
25125010	**Pham Trung Duy**	*(Signed / Confirmed via PR)*	15/10/2026
25125091	**Tran Duc Toan**	*(Signed / Confirmed via PR)*	15/10/2026
